

CleanCooler™

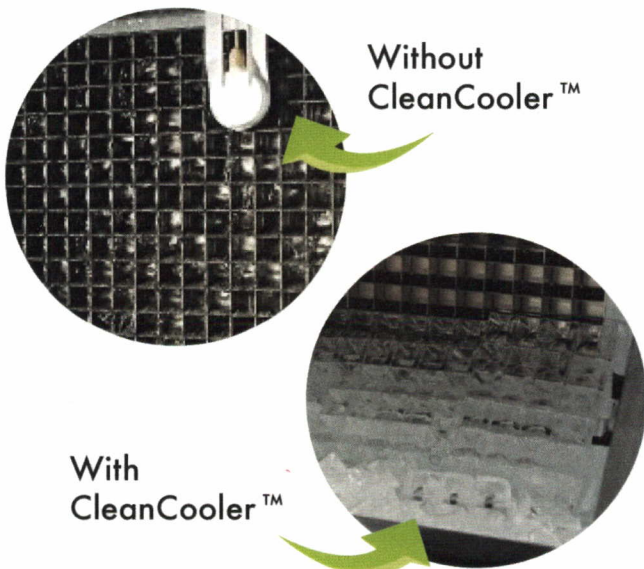

No More Cleaning Ice Machines!

CleanCooler™ Ice Machine Treatment

REGISTRATIONS:
NSF/ANSI 12
Automatic Ice
Making Equipment

The CleanCooler™ treatment is effective for spaces ranging from 1,000- 10,000 cubic ft.

Did you know, the leading cause of illness from food service is a dirty ice machine?

Keep your fridge, ice and air clean with a safe to use, chlorine dioxide generator!

- Ice machines buildup of bacteria, mold, and algae from droplets of water collecting on non-frozen surfaces. Until now, the only solution to eliminating harmful pathogens, including Listeria, E-coli, Salmonella, mold, and algae, has been deep professional cleaning.
- Ingesting dirty ice can cause food illnesses, including Cholera, Salmonella, Ecoli, Norovirus, and other pathogen-derived illnesses.
- The U.S. Food and Drug Administration Food Code is the standard for cleaning commercial ice machines. The FDA defines ice as food and recommends following the ice machine manufacturer guidelines, including cleaning an ice machine quarterly. CleanCooler™ eliminates the need for between monthly and quarterly deep cleaning.
- The cost of professionally cleaning an ice machine averages \$400 per cleaning, well above the annual cost of CleanCooler™ Ice.
- Annualized savings using CleanCooler™ instead of traditional professional hand cleaning methods are more than \$1,000 per year per ice machine!
